
Khush Patel's Homepage

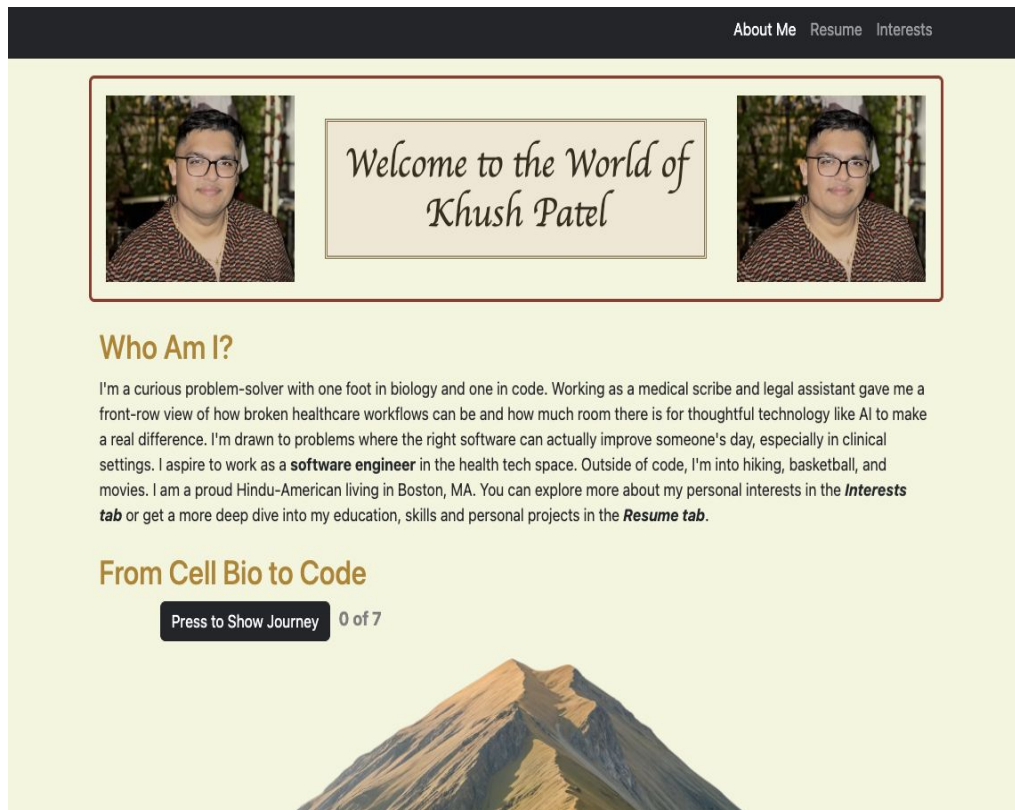

Khush Patel
CS5610 Web Development
Summer 2026

Objective

The objective was to build a personal portfolio/homepage that introduces who I am, what I'm interested in, and my professional background. I added a unique hiker/mountain animation to showcase my journey as a special feature.

Three Pages:

- About Me
- Interests
- Resume

Technologies Used

- HTML5
- CSS3 (flexbox, gradients, custom properties)
- Bootstrap 5
- Vanilla Javascript (ES6 modules)
- Google Fonts
- Tools:
 - Prettier
 - Eslint
 - Reload dev server

What I'm Most Proud of

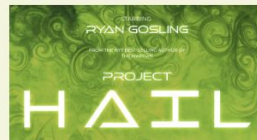

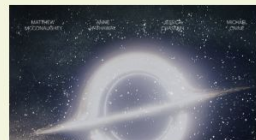

Building title cards with pure CSS gradients in my interests page.

Instead of importing images, I learned how to use radial and linear gradients from MDN in conjunction with background and text properties to build:

- Movie marquee style with theater-bulb border
- Synthwave retro gradient for video games

I searched google fonts for appropriate style using *Limelight* for the marquee and *Press Start 2P*. I loved writing my reasons why i loved these movies and video games.

Top 3 Movies

Top 3 Video Games

Uncharted 4

Uncharted 4 is honestly one of the most cinematic games I've ever played. The story between Nathan and his brother actually hit me in the feels, and the locations are gorgeous. Plus those big set pieces like the jeep chase in Madagascar are unreal.

Hardest Parts

The Mountain Animation

Figuring out absolute vs relative positioning was very tricky. I had to learn:

- Position: relative on parent, absolute on child
- Using positioning percentages and learning to experiment with it in the chrome developer tools
- CSS transitions for smooth movement
- Writing JS to move the hiker through milestones on each button click and updating bubble text

However, it was also one of my favorite parts to do as it was a unique feature of my website.

From Cell Bio to Code

Press to Show Journey 0 of 7

What I learned

- Flexbox for layouts
- Bootstrap grid and components
- CSS descendant selectors for fine control
- Vanilla JS for animation
- CSS gradients (linear and radial)
- Responsive design with percentages so looks good when enlarge or minimize screen
- Using a variety of semantic and style tags: <article>, <section>, <h1-h3>, <figure>, <figcaption>, <form>, <table>, etc/
